

Vercel Deployment Checklist for JNX-OS

Critical: This checklist must be completed for the production deployment to work

1. Environment Variables in Vercel

Required Variables

You need to add the following environment variables in your Vercel project settings:

Clerk Authentication

```
NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY=pk_live_xxx
CLERK_SECRET_KEY=sk_live_xxx
CLERK_WEBHOOK_SECRET=whsec_xxx
NEXT_PUBLIC_CLERK_SIGN_IN_URL=/login
NEXT_PUBLIC_CLERK_SIGN_UP_URL=/signup
NEXT_PUBLIC_CLERK_AFTER_SIGN_IN_URL=/app
NEXT_PUBLIC_CLERK_AFTER_SIGN_UP_URL=/app
```

Supabase Database (CRITICAL - Missing causes 500 errors!)

```
NEXT_PUBLIC_SUPABASE_URL=https://your-project.supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=your_anon_key_here
SUPABASE_SERVICE_ROLE_KEY=your_service_role_key_here
```

Qryx - Gemini AI

```
GEMINI_API_KEY=your_gemini_api_key_here
```

Qryx - Shopify Integration

```
SHOPIFY_API_KEY=your_shopify_api_key_here
SHOPIFY_API_SECRET=your_shopify_api_secret_here
SHOPIFY_SCOPES=read_products,read_product_listings,read_customers,read_orders
SHOPIFY_APP_URL=https://your-vercel-app.vercel.app
SHOPIFY_WEBHOOK_SECRET=your_shopify_webhook_secret_here
```

How to Add Variables in Vercel:

1. Go to your Vercel project dashboard
2. Click **Settings** → **Environment Variables**
3. Add each variable with:
 - **Key:** Variable name (e.g., `NEXT_PUBLIC_SUPABASE_URL`)
 - **Value:** Your actual value
 - **Environments:** Check all (Production, Preview, Development)

4. Click **Save**
 5. **Redeploy** your application after adding all variables
-

2. Supabase Database Schema

Required Tables for Qryx

The Qryx feature requires additional database tables. Run this SQL in your Supabase SQL Editor:

File to execute: `MIGRATION_QRYX_SHOPIFY.sql`

Quick Steps:

1. Go to your Supabase dashboard
2. Navigate to **SQL Editor**
3. Click **New Query**
4. Copy the contents of `MIGRATION_QRYX_SHOPIFY.sql` from the project root
5. Paste and click **Run**
6. Verify tables were created:

```
sql
SELECT table_name
FROM information_schema.tables
WHERE table_schema = 'public'
AND table_name LIKE 'qryx_%' OR table_name LIKE 'shopify_%';
```

Expected Tables:

- `shopify_shops` - Stores Shopify store installations
 - `qryx_chat_sessions` - Tracks chat conversations
 - `qryx_messages` - Stores individual chat messages (GDPR-compliant)
 - `qryx_configs` - Widget and AI configuration per shop
 - `qryx_usage_logs` - Tracks API usage for billing
 - `shopify_products_cache` - Cached product data for AI context
-

3. Shopify App Configuration

Update Redirect URLs

After deploying to Vercel, update your Shopify Partner Dashboard:

1. Go to [Shopify Partner Dashboard](https://partners.shopify.com/) (<https://partners.shopify.com/>)
2. Select your app
3. Navigate to **App Setup** → **URLs**
4. Update:
 - **App URL:** `https://your-vercel-app.vercel.app/api/qryx/auth`
 - **Allowed redirection URL(s):**
`https://your-vercel-app.vercel.app/api/qryx/callback`

5. Update **API access scopes**:

`read_products,read_product_listings,read_customers,read_orders`

⚠ **Important:** Use commas, NO spaces between scopes!

4. Verification Steps

After Deployment, Test:

✓ Basic Auth Flow

1. Visit `https://your-vercel-app.vercel.app/signup`
2. Create a new account
3. Verify redirect to `/app` dashboard
4. Check user appears in Supabase `users` table

✓ Qryx Dashboard Access

1. Login to your app
2. Navigate to `/app/products`
3. Click “Open Dashboard” on Qryx card
4. Should see:
 - “Qryx Not Installed” page (if no Shopify shop connected)
 - OR “Configuration Error” (if Supabase credentials are missing)
 - OR Qryx Dashboard (if shop is installed)

✓ Shopify Installation Flow

1. From “Qryx Not Installed” page, click “Install Qryx on Shopify”
2. Should redirect to Shopify OAuth
3. After authorization, should redirect back to Qryx dashboard
4. Verify shop appears in `shopify_shops` table

5. Common Issues & Solutions

✗ “Application error: a server-side exception has occurred”

Cause: Missing Supabase environment variables in Vercel

Solution:

1. Add all Supabase variables to Vercel (see Section 1)
2. Redeploy the application
3. Clear browser cache and retry

✗ “Configuration Error” on Qryx Dashboard

Possible Causes:

1. Supabase credentials not set in Vercel
2. `shopify_shops` table doesn’t exist (run `MIGRATION_QRYX_SHOPIFY.sql`)
3. Network issue connecting to Supabase

Solution:

1. Check Vercel Environment Variables
 2. Verify Supabase tables exist
 3. Check Vercel function logs for detailed error
-

✗ Shopify OAuth Error: “Invalid redirect_uri”

Cause: Redirect URL mismatch in Shopify Partner Dashboard

Solution:

1. Update Shopify App URLs (see Section 3)
 2. Ensure `SHOPIFY_APP_URL` in Vercel matches your deployed URL
 3. NO trailing slashes in URLs
-

✗ Widget not loading on Shopify store

Cause: Script tag not installed or incorrect widget endpoint

Solution:

1. Check `shopify_shops` table - verify `installed_at` is set
 2. Visit Shopify Admin → Online Store → Themes → Actions → Edit Code
 3. Check if script tag exists in theme files
 4. Manually verify widget endpoint: `https://your-vercel-app.vercel.app/api/widget/qryx?shop_id=YOUR_SHOP_ID`
-

6. Monitoring & Logs

Vercel Function Logs

- Go to Vercel Dashboard → Your Project → **Logs**
- Filter by route: `/api/qryx/*`
- Look for errors or exceptions

Supabase Logs

- Go to Supabase Dashboard → **Logs**
- Check for connection errors or query failures

Clerk Logs

- Go to Clerk Dashboard → **Logs**
 - Verify webhooks are firing correctly
 - Check for authentication issues
-

Success Criteria

Your deployment is successful when:

1.  Main website loads at `https://your-vercel-app.vercel.app`
 2.  Login/Signup works without errors
 3.  Dashboard loads at `/app`
 4.  Products page loads at `/app/products`
 5.  Qryx dashboard shows “Not Installed” or dashboard (not Configuration Error)
 6.  Shopify OAuth flow completes successfully
 7.  Widget loads on Shopify store frontend
-

Need Help?

If you encounter issues:

1. **Check Vercel Function Logs** first
 2. **Verify all environment variables** are set
 3. **Run database migrations** in Supabase
 4. **Clear browser cache** and retry
 5. **Check this checklist** for missed steps
