

Stripe Setup Guide V3 - Qryx SaaS Billing

Version: 3.0.0

Updated: January 4, 2026

Status: Production Ready (with Embedded Auth Fix)

Overview

This guide covers Stripe integration for Qryx's 4-tier SaaS billing model:

-  **Free Plan:** \$0/month (50 conversations, no Stripe required)
-  **Starter Plan:** \$29/month (500 conversations)
-  **Professional Plan:** \$79/month (2,000 conversations) - POPULAR
-  **Business Plan:** \$199/month (5,000 conversations)

All paid plans include a **14-day free trial**.

Critical Fixes Applied

Auth Flow (January 4, 2026)

Commit: `febbc21`

Issue: "You are signed out" error when accessing from Shopify Admin iframe

Solution: Full-page redirect authentication

How it works now:

1. User opens Qryx in Shopify Admin (iframe)
2. Sees "Sign In to Continue" page
3. Clicks button → `window.top.location.href` navigates entire browser
4. User authenticates on `jnxlabs.ai` (outside iframe, no cookie issues)
5. Redirects back to pricing page with valid session
6. Selects plan → Payment → Shopify OAuth → Done

Why: All modern browsers block third-party cookies in iframes. Cookie-based auth (Clerk, Auth0, Firebase) cannot work. Full-page redirect is the official Shopify-recommended solution.

Checkout Flow (January 3, 2026)

Commits: `d7c3d84` , `47e9dd6`

Issues Fixed:

- Shop session expiration errors
- JSON response instead of redirect

Solution: Shop passed as URL parameter throughout flow

Part 1: Stripe Dashboard Setup

Step 1: Create Products

Go to [Stripe Dashboard → Products](https://dashboard.stripe.com/products) (https://dashboard.stripe.com/products)

Qryx Starter - \$29/month

- **Price:** \$29/month recurring
- **Trial:** 14 days
- **Features:** 500 conversations, widget customization, standard analytics
- **Copy Price ID:** `price_XXXXX`

Qryx Professional - \$79/month (POPULAR)

- **Price:** \$79/month recurring
- **Trial:** 14 days
- **Features:** 2,000 conversations, advanced analytics, A/B testing (2 variants)
- **Copy Price ID:** `price_XXXXX`

Qryx Business - \$199/month

- **Price:** \$199/month recurring
- **Trial:** 14 days
- **Features:** 5,000 conversations, white label, phone support, 5 A/B variants
- **Copy Price ID:** `price_XXXXX`

Step 2: Configure Webhook

Go to [Webhooks](https://dashboard.stripe.com/webhooks) (https://dashboard.stripe.com/webhooks)

- **URL:** `https://www.jnslabs.ai/api/stripe/webhook`
- **Events:**
 - `checkout.session.completed`
 - `customer.subscription.created`
 - `customer.subscription.updated`
 - `customer.subscription.deleted`
 - `invoice.payment_succeeded`
 - `invoice.payment_failed`

Copy Signing Secret: `whsec_XXXXX`

Step 3: Get API Keys (LIVE MODE)

Go to [API Keys](https://dashboard.stripe.com/apikeys) (https://dashboard.stripe.com/apikeys)

- **Publishable:** `pk_live_XXXXX`
 - **Secret:** `sk_live_XXXXX`
-

Part 2: Vercel Environment Variables

```
# Stripe Live Mode
STRIPE_SECRET_KEY=sk_live_...
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY=pk_live_...
STRIPE_WEBHOOK_SECRET=whsec_...

# Price IDs
STRIPE_PRICE_STARTER=price_...
STRIPE_PRICE_PROFESSIONAL=price_...
STRIPE_PRICE_BUSINESS=price_...
```

Part 3: Installation Flows

Flow 1: Direct Browser Access

1. User **opens**: `https://www.jnxxlabs.ai/api/qryx/install?shop=xxx`
2. **Not** logged in → Redirect **to** `/login?redirect_url=...`
3. Login completes → Redirect back **to** `/products/qryx/setup?shop=xxx`
4. Select plan → Payment/OAuth → Done

Flow 2: Shopify Admin Embedded (iframe)

1. User opens Qryx **in** Shopify Admin
2. App loads **in** iframe → Detects no auth
3. Shows "Sign In to Continue" UI
4. User clicks → `window.top.location.href = '/login?redirect_url=...'`
5. FULL BROWSER navigates to login (exits iframe)
6. Login completes → Redirect to `/products/qryx/setup?shop=xxx`
7. Select plan → Payment/OAuth → Done

Critical: Step 4 uses `window.top.location.href`, not `window.location.href`. This navigates the TOP-LEVEL window, breaking out of Shopify's iframe.

Flow 3: Free Plan

- 1-3. Same as Flow 1 **or** 2
4. Click "Start Free"
5. Direct **to** `/api/qryx/start-oauth?shop=xxx&plan=free`
6. Generates Shopify OAuth URL (no Stripe verification)
7. Shopify permissions → Callback → App installed

Flow 4: Paid Plan

- 1-3. Same as Flow 1 **or** 2
4. Click "Subscribe Now" **on** any paid plan
5. **POST to** /api/stripe/checkout with shop + priceId
6. Create Stripe Customer + Checkout Session
7. Redirect **to** Stripe Checkout (trial starts)
8. User completes payment
9. Redirect **to** /api/qryx/start-oauth?shop=xxx&session_id=xxx
10. **Verify** Stripe session, generate Shopify OAuth URL
11. Shopify permissions ☐ Callback ☐ App installed

Part 4: Testing

Test 1: Embedded Auth

1. Open Shopify Admin → Apps → Qryx
2. Should see "Sign In to Continue"
3. Click button
4. Browser navigates to login page (NOT in iframe)
5. Login → Redirects back
6. ☒ Pricing page loads

Test 2: Free Plan

1. After login, click "Start Free"
2. Redirects to Shopify OAuth
3. Grant permissions
4. ☒ App installed, no Stripe interaction

Test 3: Paid Plan

1. After login, click "Subscribe Now" on Starter
2. Redirects to Stripe Checkout
3. Enter test card: 4242 4242 4242 4242
4. Complete payment
5. Redirects to Shopify OAuth
6. Grant permissions
7. ☒ App installed with Starter plan

Part 5: Database Schema

```
CREATE TABLE shopify_shops (
  id UUID PRIMARY KEY DEFAULT uuid_generate_v4(),
  shop TEXT UNIQUE NOT NULL,
  access_token TEXT NOT NULL,

  -- Billing
  stripe_customer_id TEXT,
  stripe_subscription_id TEXT,
  subscription_status TEXT DEFAULT 'free',
  plan_name TEXT DEFAULT 'free',
  current_period_end TIMESTAMPTZ,

  -- Shop Intelligence (Phase 5C)
  shop_intelligence JSONB,
  analyzed_at TIMESTAMPTZ,

  -- User Link
  clerk_user_id TEXT REFERENCES users(clerk_user_id),

  installed_at TIMESTAMPTZ DEFAULT NOW(),
  updated_at TIMESTAMPTZ DEFAULT NOW()
);

CREATE INDEX idx_shops_clerk_user ON shopify_shops(clerk_user_id);
CREATE INDEX idx_shops_stripe_customer ON shopify_shops(stripe_customer_id);
CREATE INDEX idx_shops_intelligence ON shopify_shops USING GIN (shop_intelligence);
```

Part 6: Key Files

Authentication

- `app/products/qryx/setup/page.tsx` - Pricing page with auth check
- `app/products/qryx/setup/embedded-auth-redirect.tsx` - Full-page redirect handler
- `app/login/[[...rest]]/page.tsx` - Login with `redirect_url` support

Billing

- `app/api/stripe/checkout/route.ts` - Create Checkout Session
- `app/api/stripe/webhook/route.ts` - Handle Stripe events
- `app/api/qryx/start-oauth/route.ts` - Verify payment & start OAuth

OAuth

- `app/api/qryx/install/route.ts` - Install entry point
 - `app/api/qryx/callback/route.ts` - OAuth callback handler
-

Part 7: Troubleshooting

“You are signed out” in iframe

Status:  FIXED (Commit febbc21)

Solution: Full-page redirect auth

“Shop session expired”

Status:  FIXED (Commits d7c3d84, 47e9dd6)

Solution: Shop in URL params

Stripe 403 CloudFront Error

Cause: Invalid Price ID or Stripe not activated

Fix: Verify Live Mode enabled, check Price IDs

Webhook delivery fails

Cause: Wrong endpoint URL or signature

Fix: Check Stripe Dashboard → Webhooks for error details

Part 8: Deployment Checklist

Vercel

- ☐ Stripe env vars set (Live Mode)
- ☐ Price IDs configured
- ☐ Webhook secret added
- ☐ Code deployed (febbc21 or later)

Stripe

- ☐ Live Mode enabled
- ☐ Products/Prices created
- ☐ Webhook active
- ☐ Test payment successful

Shopify

- ☐ Redirect URL: `https://www.jnxxlabs.ai/api/qryx/callback`
- ☐ App permissions configured
- ☐ Installed on test store
