

Environment Variables Status

Last Updated: 2024-12-29
Purpose: Zentrale Übersicht aller Environment Variables und deren Deployment-Status
CRITICAL UPDATE (2024-12-29):
Production URL changed from `jnx-os.vercel.app` to `www.jnxlabs.ai`. All Shopify configuration updated accordingly.

Current Status Overview

Category	Local (.env)	Vercel Production	Supabase	Shopify Partner
Clerk Auth	Complete	Deployed	N/A	N/A
Supabase DB	Complete	Deployed	Active	N/A
Gemini AI	Complete	Deployed	N/A	N/A
Shopify API	Complete	Deployed	N/A	Configured

Clerk Authentication (PRODUCTION READY)

Variables:

```
NEXT_PUBLIC_CLERK_PUBLISHABLE_KEY=pk_test_d2FybS1jaGFtb21zLTI1LmNsZXJrLmFjY291bnRzLmRldiQ
CLERK_SECRET_KEY=sk_test_r3oPWwiKV8tBJ4fzL4eBFpqbZiZh0Jkv8Brw01FNUg
CLERK_WEBHOOK_SECRET=whsec_XEu5X1ftUa8/02Dq417A8+kby4FWbUg8

# Clerk Routing
NEXT_PUBLIC_CLERK_SIGN_IN_URL=/login
NEXT_PUBLIC_CLERK_SIGN_UP_URL=/signup
NEXT_PUBLIC_CLERK_AFTER_SIGN_IN_URL=/app
NEXT_PUBLIC_CLERK_AFTER_SIGN_UP_URL=/app
```

- Status:**
- Local (.env):** All variables present and correct
 - Vercel Production:** All variables deployed
 - Clerk Dashboard:** Webhooks configured at `/api/webhooks/clerk`
 - Functionality:** Enterprise-grade idempotent webhooks working

Verification:

```
# Test locally:
cd /home/ubuntu/jnx-os/nextjs_space
grep "CLERK" .env

# Test in production:
https://www.jnxlabs.ai/login
```

Supabase Database (PRODUCTION READY)

Variables:

```
NEXT_PUBLIC_SUPABASE_URL=https://yxikmojxbiihkpayndw.supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=sb_publishable_Fly-6aiM0qI5ddZ-deSRtg_YwVUVfHb
SUPABASE_SERVICE_ROLE_KEY=sb_secret_sYxxG4DS_RDYEJgKU_K-rQ_yGdkSidz
```

Status:

- **Local (.env):** All variables present and correct
- **Vercel Production:** All variables deployed
- **Supabase Project:** Active at yxikmojxbiihkpayndw.supabase.co
- **Schema Status:**
 - JNX-OS Base Tables (orgs, users, audit_logs, etc.)
 - **Qryx Tables (NEW):** shopify_shops, qryx_chat_sessions, qryx_chat_messages, qryx_config, conversation_usage, qryx_product_cache, qryx_analytics_daily
 - Foreign Keys: orgs.org_id, users.user_id
 - Indexes: All performance indexes created

Recent Changes:

- **2024-12-28:** Executed MIGRATION_QRYX_SHOPIFY.sql successfully
- **2024-12-28:** Removed pgvector dependency (optional feature)
- **2024-12-28:** Fixed foreign key references (org_id, user_id)

Verification:

```
# Test locally:
node /home/ubuntu/jnx-os/nextjs_space/test-supabase.js

# Expected output:
# Connection successful!
# shopify_shops: EXISTS
```

Gemini AI Integration (PRODUCTION READY)

Variables:

`GEMINI_API_KEY=AIzaSyCQBwsACuoGh4X8PUCJ2LmD9-HiCz6qaGU`

Status:

- **Local (.env):** Variable present and valid
- **Vercel Production:** Variable deployed
- **API Integration:** `lib/ai/gemini.ts` configured for Gemini 2.0 Flash
- **Model:** `gemini-2.0-flash-exp` (optimal for cost/speed)
- **Cost:** \$0.075/1M input tokens, \$0.30/1M output tokens

Usage:

- **Qryx Chat API:** `/api/qryx/chat` - Handles customer conversations
- **Context Building:** Product recommendations with AI
- **Cost Tracking:** Usage logged to `qryx_chat_messages.tokens_used`

Pricing Strategy:

- **Average Cost per Message:** ~\$0.0001 (100 tokens avg)
 - **Target Profit Margin:** 80-85% on all subscription tiers
 - **Reference:** See `docs/QRYX_PRICING_STRATEGY.md`
-

Shopify Integration (NEEDS ATTENTION)

Variables:

`SHOPIFY_API_KEY=6e62aef5f8013048ca5b446fa86c6fae`
`SHOPIFY_API_SECRET=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`
`SHOPIFY_APP_URL=https://www.jnslabs.ai # UPDATED`
`SHOPIFY_SCOPES=read_products,read_product_listings,read_customers,read_orders`
`SHOPIFY_WEBHOOK_SECRET=to_be_generated_by_shopify # PLACEHOLDER`

Status:

- **Local (.env):** All variables present and correct
- **Vercel Production:** All variables deployed (2024-12-29)
- **Shopify Partner Dashboard:** App created with API credentials
- **App URL:** Set to `https://www.jnslabs.ai`
- **Redirect URIs:** Configured as `https://www.jnslabs.ai/api/qryx/callback`

IMPORTANT NOTE - Phase 5 Redesign:

The installation flow requires significant changes. This is NOT a simple OAuth app - it's a full SaaS platform with: - User registration/login - Product selection - Stripe payment integration - Subscription management

See CONVERSATION_STARTER.md and ABACUS_AGENT_ONBOARDING.md for complete Phase 5 requirements.

Configuration Complete (2024-12-29):

Completed Actions: 1. Vercel environment variables updated 2. Shopify Partner Dashboard configured: - App URL: <https://www.jnqlabs.ai> - Redirect URI: <https://www.jnqlabs.ai/api/qryx/callback> - API Scopes: read_products,read_product_listings,read_customers,read_orders 3. Vercel redeployed without build cache 4. Local .env synced with production

Test Shop:

- **Domain:** shopbotv3.myshopify.com
- **Purpose:** End-to-end testing of installation flow

Next Steps (Phase 5):

Before testing the full installation flow, the following components must be built: 1. Shop session management (lib/session/shop-session.ts) 2. Product selection page (/app/products/qryx/setup/page.tsx) 3. Stripe integration (checkout + webhooks) 4. Installation flow redirect (update /api/qryx/install/route.ts) 5. OAuth trigger after payment (/api/qryx/start-oauth/route.ts)

See CONVERSATION_STARTER.md for detailed implementation requirements.

Application URLs

Variables:

```
NEXT_PUBLIC_APP_URL=http://localhost:3000 # Local development
# Production: https://www.jnqlabs.ai (implicit)
```

Endpoints:

Public Routes:

- / - Landing page
- /login - Clerk sign-in
- /signup - Clerk sign-up

- `/products` - JNX Products showcase
- `/privacy` - Privacy Policy
- `/terms` - Terms of Service

Protected Routes (Auth Required):

- `/app` - Main Dashboard
- `/app/qryx` - Qryx Dashboard
- `/app/settings` - User Settings
- `/app/billing` - Billing Management

Admin Routes (Admin Role Required):

- `/admin` - Admin Dashboard
- `/api/system/health` - System Health Metrics

API Routes:

- `/api/webhooks/clerk` - Clerk webhook handler
- `/api/shopify/install` - Shopify OAuth initiation
- `/api/shopify/callback` - Shopify OAuth callback
- `/api/qryx/chat` - Qryx AI chat endpoint
- `/api/qryx/config` - Qryx configuration
- `/api/widget/qryx` - Widget JavaScript delivery

Security Notes

Critical Files (NEVER commit to Git):

- `.env` - Added to `.gitignore`
- `.env.local` - Excluded by default
- `.env.production` - Excluded by default

Git History Cleanup:

- **2024-12-28:** Removed `.env` from Git tracking
- **Commit:** `security: Remove .env from Git and update .gitignore`
- **Status:** GitHub secret protection now passes

Best Practices:

1. **Never log sensitive variables** (API keys, secrets)
2. **Use environment-specific values** (localhost vs production URLs)
3. **Rotate secrets regularly** (especially after exposure)
4. **Use Vercel's Environment Variables UI** for production
5. **Keep `.env.local.example` updated** for team onboarding

Deployment Checklist

Before Every Deployment:

- ☐ **Verify all required variables in Vercel**
 - Clerk Auth (5 variables)
 - Supabase DB (3 variables)
 - Gemini AI (1 variable)
 - Shopify API (4 variables)
- ☐ **Check database schema is up-to-date**
 - Run verification: `node verify-migration.js`
 - Expected: All Qryx tables exist
- ☐ **Update external service configurations**
 - Clerk: Webhook endpoint
 - Shopify: App URL and Redirect URIs
- ☐ **Test critical flows after deployment**
 - ☐ Login/Signup
 - ☐ Dashboard load
 - ☐ Qryx Dashboard (should show “Not Installed”)
 - ☐ Admin Dashboard (if admin role)

Post-Deployment Verification:

```
# 1. Check health endpoint
curl https://www.jnxfabs.ai/api/system/health

# 2. Check Vercel Function Logs
# Go to: Vercel Dashboard → Logs → Filter by Function

# 3. Check Clerk Dashboard
# Go to: Clerk Dashboard → Logs → Recent Events

# 4. Check Supabase Logs
# Go to: Supabase Dashboard → Logs → API Logs
```

Troubleshooting Guide

Issue: “Configuration Error” on Qryx Dashboard

Possible Causes: 1. Supabase variables not set in Vercel 2. Qryx tables missing in database 3. Network connectivity issues

Solutions:

```
# 1. Verify Supabase variables in Vercel
# Check: NEXT_PUBLIC_SUPABASE_URL, NEXT_PUBLIC_SUPABASE_ANON_KEY, SUPABASE_SERVICE_ROLE_KEY

# 2. Verify database tables
node /home/ubuntu/jnx-os/nextjs_space/test-qryx-shop.js

# 3. Check Vercel Function Logs
# Look for: "Could not find the table 'public.shopify_shops'"
```

Issue: Shopify OAuth Redirect Fails

Possible Causes: 1. SHOPIFY_APP_URL mismatch 2. Redirect URI not whitelisted in Shopify 3. Invalid API credentials

Solutions:

```
# 1. Verify SHOPIFY_APP_URL matches deployment
echo $SHOPIFY_APP_URL # Should be: https://www.jnxlabs.ai

# 2. Check Shopify Partner Dashboard
# Allowed redirection URLs must include:
# https://www.jnxlabs.ai/api/shopify/callback

# 3. Test API credentials
curl https://www.jnxlabs.ai/api/shopify/install?shop=YOUR-STORE.myshopify.com
```

Issue: Clerk Webhooks Not Firing

Possible Causes: 1. Webhook endpoint not reachable 2. Webhook secret mismatch 3. Clerk webhook not enabled

Solutions:

```
# 1. Verify webhook endpoint
curl -X POST https://www.jnxlabs.ai/api/webhooks/clerk

# 2. Check CLERK_WEBHOOK_SECRET matches Clerk Dashboard
# Clerk Dashboard → Webhooks → Webhook Signing Secret

# 3. Check Clerk webhook is enabled for events:
# - user.created
# - user.updated
# - organization.created
# - organization.updated
# - organizationMembership.*
```

-

Current Project Phase

Phase 4: Qryx Chat Widget & API Endpoints COMPLETE

Completed:

- Database Schema (7 Qryx tables)
- Chat API Endpoint (`/api/qryx/chat`)
- Widget Delivery Endpoint (`/api/widget/qryx`)
- Qryx Dashboard UI (`/app/qryx`)
- Configuration API (`/api/qryx/config`)
- Gemini AI Integration
- Shopify Client (`lib/shopify/client.ts`)
- Database Helpers (`lib/db/qryx-helpers.ts`)

Next Steps:

1. **Update Shopify variables in Vercel** (see “Shopify Integration” section above)
 2. **Configure Shopify Partner Dashboard** (App URL, Redirect URIs)
 3. **Redeploy to Vercel** (after variable updates)
 4. **Test Shopify OAuth Installation Flow**
 5. **Test Widget on Shopify Store**
 6. **Test Dashboard Configuration**
-

Health Check Summary

Component	Status	Last Verified
Clerk Auth	Operational	2024-12-28
Supabase DB	Operational	2024-12-28
Gemini AI	Operational	2024-12-28

Component	Status	Last Verified
Qryx Database	Operational	2024-12-28
Shopify Integration	Configured	2024-12-29
Vercel Deployment	Operational	2024-12-29

Note: Shopify configuration is complete, but Phase 5 (SaaS Installation Flow) requires additional components before end-to-end testing can proceed.
